

Abstract

The invention relates to a work table comprising a worktop for assembling tools. The inventive work table is characterized in that the worktop has at least one or more recesses , one worktop segment each being disposed in every recess and being mounted in the worktop so as to be rotatable about an axis of rotation that extends in parallel to the upper surface of the worktop; the work table comprises devices for locking the worktop segment in the worktop; the worktop segment, in the area of the axis of rotation, is mounted in two guides configured on the work table; and the worktop segment can be displaced alone or together with the axis of rotation along the guides in parallel to the upper surface of the worktop.
